Revolutionising early stage cancer detection with AI

Lucida Medical is a medical imaging AI startup based in Cambridge, with close links to the University and technology ecosystem. We apply AI and magnetic resonance imaging (MRI) to oncology. Our vision is to disrupt the cancer diagnostic pathway with technology that finds cancer precisely and quickly, enabling patients to receive the best possible diagnosis and treatment, ultimately saving lives.

With top of the field academic and industry co-founders, key opinion leaders as advisors and strong financial backing by investors, we are looking for highly enthusiastic, open minded individuals to join our team. This is an exciting opportunity to join a startup from an early stage and grow with the company.

We're small, so you can make a huge difference. We're a diverse team, prioritising equal opportunities, and especially welcome applications from groups under-represented in the tech ecosystem. We offer a competitive salary and a stock options plan. Help us transform the way we find and treat cancer.

Regulatory and clinical manager

This person will lead the development of our QMS, and help us secure regulatory approvals (CE, UKCA & FDA). Ideally, this person will also manage a small team responsible for clinical aspects of the business, including planning and delivering clinical studies and trials.

Key skills and experience

- Degree qualified in biomedical sciences, biomedical engineering or similar healthcare-related discipline
- Developing quality systems and documentation for regulated medical devices, including QMS, ISO 13485, ISO 14971, CE marking (MDD/MDR experience preferred)
- Contributing to Class II/IIa/IIb CE and/or FDA approvals
- Biomedical or healthcare data analysis
- Authoring scientific reports or papers.

Preferred skills and experience

The following would be a bonus but are not essential.

- Experience in clinical evaluations and/or post-market surveillance (PMS)
- CE Class I self-certification
- Software and/or AI/ML based medical devices, IEC 62304
- Usability engineering, IEC 62366-1
- Auditing experience (internal or external)
- Clinical research or clinical trial design.

Key personal qualities of an ideal candidate would be self-motivation, problem-solving, ability to work within a team and by themselves.

Previous management experience is not required and support will be available. A background in software or AI is not a prerequisite, though some understanding of methods and tools will be beneficial, and you will be able to work with AI experts and a software platform that is already achieving state-of-the-art performance.

While we are currently working remotely due to Covid-19, this role will be based in our Cambridge office once we are able to re-open.

Application Process

Please apply directly (no agencies please) by sending us a CV and covering letter explaining how your skills and experience meet our requirements, outlining your background and why you are interested in this role.
